

Laminate Repair Sticks

- For filling deep scratches and imperfect joints
- Repairs can be made without sanding
- Can be blended together for a closer colour match

Liberon Laminate Repair Sticks can be used to fill medium to deep scratches and poor fitting joints in laminate flooring. They can also be used on laminate and wood surfaces to fill nail and pin holes.

Application

Select the colour stick closest to that of the laminate that requires filling, if in doubt choose a colour that is slightly darker than the laminate.

Rub the Laminate Repair Stick across and along the scratch until it is completely filled. Allow the wax to harden then buff using a soft, lint-free cotton cloth. For superficial scratches and scuffs use Liberon Laminate Reviver.

Important: Always test products first on a spare surface or an inconspicuous area to check colour, compatibility and end results.

Packaging

Mixed pack of three colours.
